

<p>»» What is Black Ice Liquid Edition?</p>	<p>Black Ice Liquid Edition is a coating that is put on your screen to fortify it using nanotechnology. Nanotechnology is the branch of technology that deals with dimensions and tolerances less than 100 nanometers. What does that mean? Well, it means that it's completely invisible to the naked eye! It creates a honeycomb structural pattern on your screen which, once bonded, protects the surface from water, abrasions and scratches.</p>
<p>»» How does Liquid Edition work?</p>	<p>We use Shark Proof technology which manipulates the atomic structures to bond with your existing glass surface in order to create a screen protector.</p>
<p>»» Will it harm my screen?</p>	<p>Black Ice Liquid Edition does not harm your screen. It has been designed, tested and retested in order to ensure that it does not have any negative impact on your device.</p>
<p>»» Can I take it off?</p>	<p>Once Black Ice Liquid Edition is applied to your device you won't know it's there. But if you feel so inclined you may remove the coating by using alcohol based cleansers.</p>
<p>»» Can it be used all over my phone?</p>	<p>Black Ice Liquid Edition is formulated to bond to glass surfaces only. While applying the protector all over your device will not harm it, the liquid will evaporate off of any surface that is not glass. Fun Fact: Black Ice Liquid may be used on the camera portion of your phone.</p>
<p>»» Does Black Ice Liquid make my device anti-bacterial?</p>	<p>Yes, it does. This is a two-part process. First, the Cleaner/Primer will kill any existing bacteria on your device, wiping away germs, grease and oil from your hands as well as any unwanted residue which is invisible to the naked eye. Second, when applying Black Ice Liquid Edition to the glass area of your device it creates a thin layer which bonds in a way not to allow germs and bacteria to harvest on the device. TechTonic or other non-alcohol cleanser should then be used for continuous cleaning.</p>
<p>»» What will make the nanotechnology layer come off?</p>	<p>Black Ice Liquid Edition is very durable; however, it can be removed when using cleaning supplies that are alcohol based or when it is excessively exposed to liquids/splashes. We recommend you re-apply coating after every 12-14 months depending on your usage.</p>
<p>»» Can I use Black Ice Liquid Edition if my screen is cracked?</p>	<p>No, it is not recommended to put any liquid screen protector onto a cracked screen. Repair your screen before applying Black Ice Liquid Edition.</p>
<p>»» Can I coat my smartwatch and phone at the same time?</p>	<p>Yes, but ONLY IF your smartphone is under 10" screen size. You must coat them at the same time.</p>
<p>»» Why do I need a cleaner/primer?</p>	<p>The first sachet (marked 1) is a cleanser and primer in one. This not only removes dirt, germs that may be on your screen, but also preps the glass surface so the applicator can bond with it and stick to the surface. It is invisible and completely safe for your device. It also eradicates 99% of the germs on your screen!</p>
<p>»» What does the Nano Applicator do?</p>	<p>This specialized formula is the screen protector on a wipe. Apply as evenly as possible across your device. We advise using an up/down motion followed by a side to side motion to ensure that your device is fully covered. The applicator is self-balancing so it will even itself out for you.</p>
<p>»» How do I apply Black Ice Liquid Edition on my device?</p>	<p>1- Wipe down device screen with provided microfiber cloth 2- Apply Cleaner/Primer onto device until wipe is dry 3- Wait a few minutes then apply nano applicator evenly across the entire screen until the wipe is dry 4- Wait 15 minutes then use the provided microfiber cloth to buff the screen until smear marks are gone</p>
<p>»» How long does it last?</p>	<p>Black Ice Liquid Edition is designed to last up to 2 years, depending on usage. It is recommended that you re-apply between 12-14 months.</p>
<p>»» How many devices can one pack coat?</p>	<p>One pack is designed for one device up to 10.1" screen size. Your average phone will be between 5-6" and a small tablet is generally between 9-10". We do not recommend that you try to coat 2 separate devices as it may not generate the desired result.</p>
<p>»» When is the best time to apply the coating?</p>	<p>The best time to apply the coating is when you are least likely to use your device, such as before going to bed. This will ensure that the coating has enough time to bond with the glass surface.</p>
<p>»» Does it make my device waterproof?</p>	<p>No, Black Ice Liquid will not make your device water proof.</p>
