

# DeX

## Desktop experience dock

The Samsung DeX desktop experience dock enables you to turn your Galaxy S8 and Galaxy S8+ into a true desktop PC experience. By docking the Galaxy S8 or Galaxy S8+ into the DeX, your phone will launch a special DeX mode on the connected external monitor and applications can be opened in multiple separate windows. Connect a mouse, keyboard, and Ethernet cable for added productivity.

### Multi-window productivity

Work in multiple documents at once and toggle between apps more easily. Drag and drop between windows. A built in fan keeps your phone cool while it uses its processing power.

### Use your phone while you work

Phone calls, text messages and settings are all accessible from the taskbar on your monitor.

### DeX optimized app collection

Samsung is working with developers to create a library of compatible apps optimized for use with DeX Station. The current collection, which is expanding every day, includes commonly used apps by Microsoft, Adobe and Google.

### Features
